Project Webpage: <https://github.com/sesweet/Patient-Tracker-System-Demo>

Overview

The Patient Tracker System helps patients, providers, and administrators manage appointments, medical records, and communication efficiently. Patients can access healthcare information and request refills on prescriptions online, while providers and administrators stay organized and have a reduced workload.

Key Features

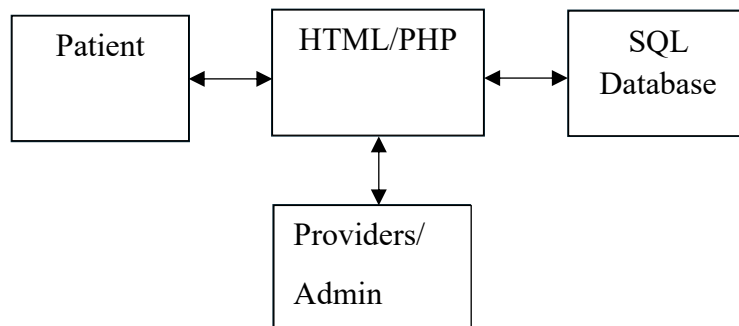

- Patients can:
 - Create an account and log in to their account
 - Schedule/manage their appointments
 - View their medical history and current treatment plans
 - Request refills for their prescriptions
 - Communicate directly with their provider
- Providers can:
 - View their schedules
 - Communicate with patients
- Administrators can:

- Schedule/manage appointments for patients
- View provider schedules

System Requirements

- Operating System: Windows, macOS, etc.
- Software: Web browser
- Backend: PHP and MySQL database
- Frontend: HTML(BBEdit)

System Block Diagram

Project Status

I have finished the planning portion of the project. I have started creating the database, and I have a basic working website where patients can create/log into their accounts, schedule/view appointments, and view medical history.

Future Goals

I need to finish making the different use cases on the website. I also need to add a provider/administrator view. I also plan to make the Patient Tracker look better. Right now, it is very basic, and there isn't much styling.
